## Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper  
by Pictorial Review

Cream white marquisette embroidered in conventional design in bright colors may be used most effectively for this frock. It is designed for misses and women whose bust measure does not exceed 36 inches.

Charming frocks are made up in marquisette trimmed with bold embroidery in bright colors artistically blended. The designs of the embroidery are exceedingly original, though in most instances simple.

There is no lining to the dress, and the skirt is a three-piece model with a three-piece upper part.

To make it will require 4 1/2 yards of 36-inch, 3 3/4 yards of 44-inch or 3 yards of 54-inch material. Marquisette varies in price from 40 cents a yard, for a good quality, to \$2.

In using 36-inch material, it first should be folded, and the pattern arranged on a lengthwise fold of the goods, while the remaining parts are placed on a lengthwise thread of the material. It is optional whether

### AN EMBROIDERED MARQUISSETTE

the material is embroidered before it is cut or afterward. Experience, however, has taught that it is better to do this before cutting out the material; then one avoids the danger of stretching and loss of line.

Now turn the hem in the right front of the waist on small "o" perforations. Gather the upper and lower edges of front and back between double "T" perforations. Sew yoke to front and back notches and centers even. Close under-arm seam as notched. Large "O" perforations indicate center-front.

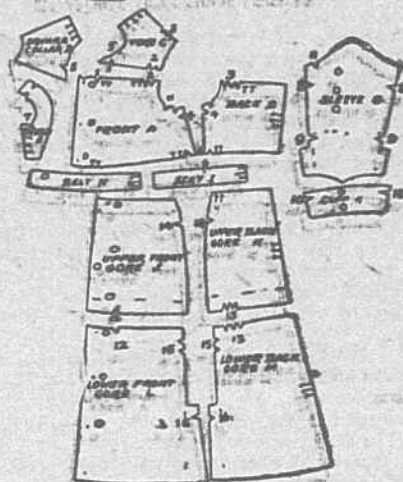

Sew large collar to neck edge as notched. Sew stay to lower edge centers even, small "o" perforation at under-arm seam. Turn hem in shield at notches, sew standing collar to neck edge as notched.

The sleeve is not difficult to make, and the same directions that have been given as to frequently in these columns may be carried out here, since there is no variation from the simple sewing up of the sleeve and inserting it into the armhole as notched.

For the skirt, now turn under the edges of the right front gores on small "o" perforations. Close side seams as notched. Pleat extensions in lower front and back gores, creasing on slot perforations, lap to small "o" perforations and press. Turn under lower edge of upper front and back gores on slot perforations; adjust lower gores to position underneath upper gores, notches and centers even. Large "O" perforations indicate center-front; stitch in tuck effect. Lap right front gores on left, centers even; stitch to position from single large "O" perforation in upper front gore to lower edge. Sew to lower edge of waist, over stay, centers even, easing fullness between double "T" perforations in upper back gore. Adjust belt to position, centers even. Large "O" perforation in belt indicates center-front and upper edge.

The effectiveness of the dress may be enhanced by hemstitching the upper section of the skirt.

## MODELS SHOW PROPER WAY

Of Lumbering and They Will Be  
on Display at Forest Products Exposition.

WASHINGTON, April 28.—Two models which show how the government sells its lumber have just been prepared at Washington, for display at the forest products exposition, to be held in Chicago April 30 to May 9 and in New York May 20 to 30. These models represent an acre of western yellow pine land in a national forest of the southwest before and after logging.

Entire Process.

In the model showing the stand before the lumberman goes into it the trees range from those only a few years old to large, overmature, stag-headed individuals more than ready for the ax. In the second model the mature trees and all others larger than a certain diameter have been cut down and made into logs and cordwood. In this, as in all government sales, the stumps are cut low to avoid unnecessary waste, large are taken to a small diameter well up into the tree, and such material as it is not fit for lumber is converted into cordwood. Together, the models show the care which the government requires of lumbermen in felling old trees so that the young growth is not injured. The brush is piled in heaps for burning after the lumber has been removed. In order that the fire menace which forests may be done away with. The models are on a scale of about one inch to five feet, so that trees approximately 100 feet tall are about 20 inches high in the models.

It is the intention of the forest service to have these models set forth certain points in regard to the timber sales conducted by the government. They will demonstrate, in the first place, that the timber on the national forests is for sale at the highest bidder when it is wanted for commercial purposes and how it may be given away to local settlers and prospectors for developing homesteads or mines. The models themselves indicate that the timber is cut in such a way as to eliminate all avoidable waste of wood and to secure a continuance of the forest crop, not only for timber production but for the protection of the soil.

They further show the fundamental principles applicable to many logging operations, that the mature and overmature trees should be removed, that thrifty growing young trees should be left to produce seed and increase the reproduction of the stand, and that the young growth should be protected from damage in lumbering operations.

Supplemented by Chart.

The models are supplemented by a graphic chart, which shows by pictorial means of graded size the increase of timber sales on the national forests from 1905 to 1913, inclusive. In 1905 the timber sold from the national forests aggregated 96,000,000 board feet, which brought the government no more than \$85,000. Three years later the amount of timber sold increased to nearly 390,000,000 board feet, and the money received rose to \$755,000. In 1911, 830,000,000 board feet sold for more than \$2,000,000, and in 1913 more than 2,000,000,000 feet brought in contracts amounting to \$4,500,000. Not all this money was received in any one year, because national forest timber is sold on contracts which range from one to twenty-five years, and it is paid for as cut.

## ISSUE CHARTS OF THE CANAL

Does United States Coast and Geodetic Survey Office for Use of Vessels.

WASHINGTON, April 28.—The fact that the Panama Canal is approaching completion and that a large number of vessels will undoubtedly avail themselves of this short route from the Atlantic to the Pacific has been anticipated by the department of commerce in the publication by the United States Coast and Geodetic Survey of a series of charts of the canal and its approaches.

The general chart of the Panama Canal and approaches, No. 954, which has recently been issued, is on a scale of 1:146,000 or one-half inch to the nautical mile, and is in colors. The canal is colored black blue, and the ocean water a light blue, while the region at the canal zone is colored a light pink tint and the territory of Panama is given a pale buff tint. The soundings are given in feet. The tidal data is for mean low water springs in the gulf and Bay of Panama and mean

low water in the Caribbean sea and Limon Bay. The mean higher high tide at Colon is only 12 feet above the tidal plane and the lowest tide 2 feet below that plane. At Balboa the mean higher high water being 14.5 feet above the plane of reference and the lowest 4 feet below it. The surveys on which this chart are based were made by the Coast and Geodetic Survey in 1905 and 1912, but surveys made by the Isthmian Canal Commission and information obtained from other sources have also been utilized. The lighthouses and buoys for the aid of navigators in the approaches to the canal are shown and their characteristics indicated. The elevations on land are given in feet above high water. There are two compass roses and a border scale on the chart. The magnetic declination in this region is given as 4 degrees 25 minutes east in 1915, with an annual decrease of 1 minute.

Interest to Tourists.

This chart, besides its usefulness for purposes of navigators, will also be of interest to the large numbers of tourists who visit or pass through the canal. Three other charts, Nos. 950, 952, and 953, are on larger scales for special uses. Chart No. 950, of Colon Harbor and approaches on the Atlantic side, is on a scale of 1:15,000. Chart No. 952, which includes Panama Harbor and the Pacific end of the canal and its approaches is on a scale of 1:40,000. Chart No. 953, on a scale of 1:20,000, also shows Panama Harbor and the Pacific end of the canal. Being on a smaller scale this chart includes a larger area than No. 952. The last three charts are not colored, but they give the same data as the general chart (No. 954) on a larger scale and for a more limited area. All are on the Coast and Geodetic Survey. They may be obtained from the office of the Coast and Geodetic Survey in Washington or from sales agents at the principal ports in the United States at the price printed on each chart.

## NORWEGIANS TO CELEBRATE INDEPENDENCE

Thousands of Americans to Witness Centennial Affair in Christiania.

CHRISTIANA, April 27.—Thousands of American visitors are expected here during the summer to witness the celebration of the centennial of the independence of Norway from Denmark. The celebration will also commemorate a hundred years of peace on the Scandinavian peninsula. An exhibition which will seek to show the progress made in Norway during the last century will be opened by King Haakon in Christiania on May 15. Norwegian-Americans have been invited to participate in the exhibition and in the celebration generally. In a special pavilion called "Norway Abroad" the Norwegians who have sought a home in America will show their home-staying countrymen the life they lead in their adopted home.

North Dakota Gives \$10,000. The plans for the exhibition and festivities have met with great interest and enthusiasm in the United States, a substantial indication of which is the appropriation of North Dakota of \$10,000 for the expenses of the official participation of that state. Alfred Gabrielson has arrived to take charge of North Dakota's exhibit. Minnesota and Wisconsin will also be adequately represented, but in a less official way. An interesting feature of the exhibit of these states will be the publication of special histories of the states, showing the strenuous work of Norwegian pioneers, who helped to build them up, and the prosperous conditions under which they now live.

One of the most interesting features of the program will be a great home coming gathering of Norwegian-Americans, and preparations are being made to entertain at least fifty thousand people. Some societies from the Norwegian states have chartered their own steamships and will sail direct from New York to Christiania. These parties will be accompanied by their own bands. Americans are expected to take a very conspicuous part in the celebration, not only because of the large number of Norwegians settled in America, but because of the good feeling prevailing between the two countries. The stars and
